

## Remote access technology!

### Simple Software Solutions

is as it's name suggests – simple to use and easy to set up with no great computer skills required. Unlike many software products, installation, training and support are included at a very affordable cost and can now be accessed by regional and remote businesses using the internet and telephone.

Developed in Australia by industry professionals

**Brendan and Gerri Hanna** the software includes:

- **QuikQuote** for quoting and price listing. It produces accurate, client-ready quotes from components and materials with minimal data entry and can add quoted items into a customisable price list, which can be updated as costs rise. It also stores cutting lists and bills of materials.
- **SuperSchedule** provides complete scheduling and tracking of progress for all production orders through each stage of the manufacturing process. Workload reports show time and dollar value for each stage and allow jobs to be rearranged to suit altered conditions.
- **PowerPurchase** creates orders to suppliers, linking each item to its factory job number and tracking the status and value of all orders placed.

The software has been designed to be simple to use, yet accurate and flexible enough to cover a wide range of work practises, making it

ideal for clients without a lot of time or computer skills. All three programs can run alone or be integrated to share information.

Brendan Hanna, who has over 35 years experience in the cabinetmaking industry developed the software with Gerri, a computer professional for 20 years, and uses the internet and telephone to demonstrate the programs to interested clients on their own PC. He also uses the internet to install software on the user's PC or network, to train users on their own system and to offer support as required.

**John Kerridge of West Tec Commercial Furniture** in Auckland, the first NZ customer to set up QuikQuote using this simple technology said, "It was as if Brendan was in Auckland with us. It gave me a lot of confidence to get it up and running quickly and to know that getting future help was just as easy. We now have the ability to get accurate quotes out quickly and to update our price list automatically."

"These remote access tools enable us to provide a comprehensive personal service to our clients, overcoming the difficulties associated with remote areas and time constraints of busy people," Brendan explained. "We're available as and when required without the expense of travelling to the site, keeping the cost of our software affordable."
