

TRACK PURCHASE ORDERS QUICKLY

PowerPurchase, a new software package from Simple Software Solutions, is a simple to use but highly effective ordering system that can track and report on outstanding orders, specific to a job number or project, partially completed orders or value of purchases by supplier in any selected period.

It can search for previous orders, has a copy facility to create and modify regular orders from a template, select from a list of materials that stores the supplier's details, product description and code.

Simple Software Solutions also has QuikQuote, quoting and price listing software and SuperSchedule, scheduling and progress tracking for production orders. Designed to be simple to use, yet fast, accurate and flexible enough to cover a wide range of work practices, all three programs can run alone or be integrated to share information and minimise data entry. Installation, training and support are included in a very affordable cost.
